SUMMARY

AI Engineer with expertise in machine learning, deep learning, and generative AI applications. Proficient in Python, TensorFlow, and modern AI frameworks, with strong skills in data analysis and visualization. Experienced in delivering end-to-end projects, from LLM-powered chatbots to voice-based podcast generation and interactive dashboards.

EDUCATION

- **Bachelor's in Artificial Intelligence** 2021 – 2025
The Islamia University of Bahawalpur

EXPERIENCE

- **AI Engineer Intern | DeepEmbed** (Aug 2023 – Dec 2024)
Gained hands-on experience with machine learning algorithms, model evaluation, tuning, and optimization.
- **Python Intern | Enigmatix** (May 2023 – Sep 2023)
Developed proficiency in Python programming, data structures, and OOP concepts.

SKILLS

- **Programming:** Python (Pandas, Numpy, Scikit learn, TensorFlow, Pytorch Basics, FastAPI), SQL.
- **Data Science:** Exploratory Data Analysis, Data Visualization, Cleaning, Statistical Analysis, Data Engineering.
- **Machine Learning:** MLOPS, Neural Networks, NLP, LLM Applications, RAG, LangChain, LangGraph.
- **Tools:** Git, Streamlit, Microsoft Azure (Basics), Kaggle, Google Colab, Github, Docker.
- **Soft Skills:** Problem Solving, Critical Thinking, Communication, Time Management.

ACHIEVEMENTS

- Participated in **M(IT)^2 2025 Winter Contest**
- Participated in AI Bootcamp at DeepEmbed Lab .
- Delivered Python Workshop for ACM-IUB.
- Python Team Member, ACM - IUB Chapter 1.

PROJECTS

- **Virtual Try-On System – Final Year Project:**
Engineered a cloud-based AI try-on system using pose estimation, segmentation, and image synthesis; integrated ReactJS frontend with Ngrok-powered inference for realistic virtual fitting.
- **Pakistani Legal Chatbot – RAG Based:**
Created an AI-powered legal assistant using LangChain, Groq LLM, FAISS, and HuggingFace embeddings to provide real-time, document-grounded answers to Pakistani law queries, with admin-controlled updates and RAG-based QA.
- **AI-Powered Podcast Generator – Sentiment & TTS Based:**
Built a Streamlit app using LangChain, Groq LLM, and ElevenLabs TTS to analyze script sentiment, rewrite narration, and generate podcasts with sentiment-driven background music and audio mixing via Pydub.
- **AI Analyst – LLM-Powered Data Visualization Tool:**
Developed an AI assistant that converts natural language queries into dynamic EDA visualizations using LLMs, generating Python code with Pandas and Seaborn for tasks like chart creation.
- **Hematology Analyzer using Machine Learning:**
Processed animal cell images using OpenCV and PCA and trained a machine learning model to classify normal vs. abnormal cells, enhancing diagnostic accuracy with Plotly/dash as frontend.
- **Cyanobacteria Classification:**
Implemented an EfficientNet-B0 deep learning model to classify 13 cyanobacterium types from microscopy images; expanded the dataset by scraping 3 additional classes online, addressed class imbalance using weighted loss and augmentation, and improved accuracy by 15%.

CERTIFICATIONS

- **Data Analysis with Python – IBM** February 2025
- **Certificate in Artificial Intelligence** November 2024
- **Azure AI Fundamentals – Microsoft** September 2023
- **Artificial Intelligence (ML, DL, Communication) – NAVTTC** September 2023
- **Python for Machine Learning – IBM** August 2023
